[PDF] Adaptive deanonymization of blockchain transactions leveraging integrative neural architectures in decentralized networks

R Saxena, BK Chaurasia, A Awasthi, L Upadhyay - Scientific Reports, 2026

The pseudonymous nature of decentralized networks like Bitcoin presents tremendous obstacles for regulatory compliance, forensic auditing, and cybercrime investigation. Traditional heuristics and single-modality machine learning (ML) frameworks provide partial transparency but usually suffer from the modality isolation problem, which fails to consider spatial graph structure, temporal transaction velocity, and local metadata patterns simultaneously. To break these limitations, in this paper …

[PDF] Do Private Blockchain Testbeds Still Matter? An Empirical Comparison of a Hyperledger Besu QBFT Testbed and Local Ethereum Execution Backends

S Sayed, MS Famous, RT Khan, MS Kaiser… - Blockchains, 2026

Starting a private blockchain testbed takes hours; starting a local Ethereum backend takes one second. Tools such as Anvil, Hardhat Network, Ganache, and the EthereumTesterProvider of web3. py each deliver a fully functional EVM, pre-funded accounts, and a JSON-RPC endpoint instantly, with no containers, genesis configuration, or consensus parameters required. This raises a question that prior work has not answered: does a multi-node private blockchain testbed still justify its …

[PDF] Monetary holdings, speculation, and transaction costs stability in two-token blockchains

N Dimitri - Humanities and Social Sciences Communications, 2026

Dual-token models are being adopted by blockchains more and more frequently, in an effort for improving stability and functionality of the platform. Despite their increasing importance and complexity, contributions to a deeper understanding of their underlying features seem to be lacking. In an attempt to try filling this gap, this study investigates the economic ramifications of this model, focusing on three main related issues. The dynamics of the two-token holdings and how they relate to each …

Extending Subsidy Bridge to Bidirectional Interoperability

Y Geng, W Huang, B Qin, B Wei, J Liu, X Li, W Shi - International Conference on …, 2026

On-chain light clients (OLCs) enable trust-minimized cross-chain interoperability. However, sustaining OLC infrastructure remains challenging: relayers lack revenue when cross-chain demand is low. A recently proposed framework, Subsidy Bridge, tackled this by issuing target chain T's token for relayers of source chain S data, but the design is unidirectional. This paper introduces Reverse Subsidy Bridge, extending prior work to enable bidirectional interoperability. The key innovation lies …

Evaluating Decoupled Certificate Management in Modular Automation Architectures Through Blockchain-Based Approaches

M Madsen, T Schill, M Barth - 2026 IEEE 31st International Conference on Emerging …, 2026

Modular automation architectures enable flexible, plug-and-play production systems by encapsulating individual control logic within independent modules. However, security mechanisms, and certificate management in particular, conflict with this paradigm because the current centralized design of public-key infrastructures makes it difficult to integrate heterogeneous communication protocols in nested architectures. This work investigates blockchain-based certificate management as a …

Security Aspects of Payment Channel Networks

MA Grundmann - 2026

Konventionelle Zahlungssysteme basieren auf vertrauenswürdigen Parteien wie Banken oder Zahlungsdienstleistern. Mit Bitcoin wurde ein dezentraler Ansatz eingeführt, bei dem an die Stelle einer zentralen Vertrauensinstanz ein Peer-to-Peer-Netzwerk tritt, in dem Konsens über den Zustand einer Blockchain hergestellt wird. Eine Blockchain ist eine Datenstruktur, die sämtliche Transaktionen speichert und ohne eine zentrale Partei verwaltet wird. Durch den Zugriff auf alle Transaktionen …

[PDF] The Influence of Financial Literacy, Financial Technology, Herding Bias, and Risk Perception on Cryptocurrency Investment Decision

RL Rahmani, TM Kusumaningrum - Proceeding of International Management …, 2026

This study aims to examine the influence of financial literacy, financial technology, herding bias, and risk perception on cryptocurrency investment decisions among Millenials and Generation Z in Indonesia. The phenomenon of cryptocurrency investment in Indonesia is growing rapidly, yet this growth is not matched by adequate financial literacy. The study employs a quantitative approach with an associative-causal design. The study sample consisted of 315 respondents selected …

[PDF] Governing AI and Blockchain in Finance: A Layered Trust Framework

D Mishra, R Agarwal, RK Mishra - 2026

AI is increasingly embedded into all aspects of financial markets; from credit decisions, compliance processes, trading strategies to payment systems. At the same time, blockchain-based finance has evolved from a speculative niche product into an integral part of the regulated market infrastructure. An integrative review of these two trends is necessary to examine their potential for convergence and how this will necessitate changes in governance. The review uses foundational academic …

[PDF] PROYECTO DE TITULACI ON

RE Faz Intriago

Quiero expresar mi más sincero agradecimiento a mis companeros de carrera: Josue B., Josué E., Brandon, Laylin, Jair, Lesly, Mónica, Mayerly, Christian, Andrick, Luis, Jhanira, Melany, Steeven R. y Steven V. Gracias por su companerismo, por las incontables horas compartidas entre clases, proyectos y desvelos, y por su apoyo constante y sus palabras de aliento. Cada uno de ustedes ha aportado algo único a este proceso, y me siento verdaderamente agradecido de haber recorrido este …

[PDF] Τα Κρυπτονομίσματα ως πρόκληση και ευκαιρία για τις τράπεζες και τις νομισματικές αρχές στον 21ο αιώνα: Θεσμική και χρηματοοικονομική προσέγγιση

ΖΩΗ ΚΡΙΚΗ

12. Περίληψη (Abstract) Η παρούσα διπλωματική εργασία εξετάζει τον ρόλο των κρυπτονομισμάτων ως πρόκληση και ευκαιρία για τις τράπεζες και τις νομισματικές αρχές, μέσα από θεσμική και χρηματοοικονομική προσέγγιση. Η έρευνα βασίζεται σε

Συστηματική Ανασκόπηση Βιβλιογραφίας (SLR) και αναλύει την επίδραση των κρυπτονομισμάτων, της τεχνολογίας blockchain και των αποκεντρωμένων χρηματοοικονομικών εφαρμογών (DeFi) στην τραπεζική διαμεσολάβηση, στη …
