The programmed organization decentralized autonomous organizations and the transformation of organizational decision architecturesJ Harth, G Alexiou - *Information Technology & People*, 2026

Purpose This article examines decentralized autonomous organizations (DAOs) through Luhmann's systems theory, asking what happens when organizational decision premises are no longer communicatively constituted and interpreted but compiled and executed as code. The concept of the "programmed organization" captures the decisive shift: a displacement of organizational contingency from operation to governance. Design/methodology/approach Drawing on Luhmann's ...

**Blockchain-Secured Machine Learning Intrusion Detection for Renewable Energy Smart Grid: Supporting LFC and AVC Continuity in Fog IoT Environments**J Ahmad, M Alduailij, A Alfaidi, AM Alamoudi... - ... *Computing: Informatics and ...*, 2026

Flooding attacks against IoT-enabled fog nodes in renewable-integrated smart grids threaten the telemetry that load frequency control (LFC) and automatic voltage control (AVC) depend on, risking frequency and voltage instability and disrupted dispatch. This paper presents a blockchain-secured machine learning framework for real-time intrusion detection in fog-based IoT environments. A four-layer architecture combines IoT edge monitoring, fog-side extraction of 32 engineered traffic features, a ...

**Comparative Analysis of Volatility in Green Cryptocurrencies Versus Conventional Cryptocurrencies**I Bhardwaj, Reepu - *Integrating Industry 5.0 and 4.0 for Technology and ...*, 2026

By introducing decentralised financial systems as a critical factor, cryptocurrencies have altered and enhanced the financial industry dramatically. Despite the growth in popularity, the extreme price fluctuations of cryptocurrencies have been identified as a vital issue. Furthermore, since traditional cryptocurrencies like Bitcoin were based on high-energy-consuming tasks, green cryptocurrencies with energy-saving consensus mechanisms are evolving. The information about conventional ...

**TU CRIPTOPLÁN A 10 AÑOS: Cómo construir tu portafolio desde 10 euros**

RJ Maestre - 2026

En Tu criptoplán a 10 años: Cómo construir tu portafolio desde 10 euros, descubrirás una metodología clara, práctica y accesible para iniciarte en la inversión en criptoactivos sin necesidad de grandes conocimientos previos ni elevados capitales. La propuesta diferencial de Raúl Jaime Maestre combina educación financiera, estrategia de largo plazo y gestión del riesgo, alejándose de la especulación para centrarse en la construcción disciplinada de patrimonio, porque las criptomonedas ...

**[PDF] A blockchain-based system for the issuance and verification of educational qualifications towards forgery prevention: a case of Tanzania**

SH Said - 2025

Forgery of educational qualifications is rampant worldwide, undermining the integrity of education and employment systems, compromising workforce quality, and hindering economic development. Conventional methods and strategies to address the problem have been abortive. Blockchain, capitalizing on its unique attributes, including decentralization, distribution, disintermediation, immutability, tamper-proof, transparency, and anonymity, has the potential to streamline the verification process ...

[PDF] Bitcoin and Artificial Intelligence: Toward a Digital Economy Less Reliant on Bank Intermediation: A Critical Integrative Review and Foresight Study

SFG Al-Junaid - Semarak International Journal of Machine Learning, 2026

This study examines how the convergence of Bitcoin and artificial intelligence (AI) could reshape selected functions of the digital economy and reduce reliance on bank intermediation, while critically testing the limits and risks of that proposition. It distinguishes between eliminating intermediaries and redistributing intermediation functions. Bitcoin can enable direct settlement between parties in selected payment contexts, whereas AI can add a decision and coordination layer for payment routing ...

[PDF] Advanced Properties of Digital Signature Schemes

H Ek - 2026

In today's digital society it is of great importance to be able to authenticate ourselves to others and verify the identity of others without any physical interaction. Digital signatures are a well established cryptographic primitive used for authentication over the internet. They are a purely asymmetric primitive and do not require any pre-shared secrets between the authenticating and the verifying parties. However, with our ever-growing dependence on digital platforms for communication, storage and ...

[PDF] Tamper-Evident Incident Response and Digital Evidence Management for Connected Vehicles Using Permissioned Blockchain

MSI Shagor - 2026

Connected vehicles require incident-response mechanisms that preserve forensic integrity without moving high-volume or privacy-sensitive telemetry directly into a distributed ledger. This paper presents a permissioned-blockchain-assisted incident-response architecture in which normalized evidence is maintained in a local tamper-evident journal while compact integrity checkpoints are periodically committed to a validator ledger. Each evidence record is canonicalized, sequence-linked with SHA3 ...

[PDF] COMPARATIVE ANALYSIS OF BLOCK CHAIN-BASED SMART CONTRACT FRAMEWORKS: SECURITY, EFFICIENCY, AND DEPLOYMENT CHALLENGES

MT Scholar

Blockchain technology has transformed digital transactions by introducing decentralized, transparent, and tamper-resistant systems. Smart contracts, which are self-executing programs deployed on blockchain networks, automate contractual agreements without intermediaries. Various blockchain platforms have developed distinct smart contract frameworks with different approaches to security, scalability, execution efficiency, and deployment. This analytical review compares major smart ...
