[HTML] Accountability in smart contracts and agentic AI: How to address the responsibility gap and retain meaningful human control?

KT Cheung, S Ramamoorti - AI and Ethics, 2026

This conceptual paper examines the ethical challenges of ascribing responsibility when an Agentic AI embedded within a smart contract leads to harm or an unintended and undesirable outcome. It becomes exceedingly difficult in such scenarios to definitively assign moral or legal blame to any human actor (eg, the programmer, deployer, or user). Applying the tripartite framework (attributability, answerability, and accountability) of responsibility and developing accountability as …

Blockchain-enabled energy markets in emerging economies: a conceptual framework for efficiency, inclusion, and sustainability

D Mhlanga - Frontiers in Blockchain, 2026

Blockchain can transform emerging energy markets through decentralised transactions, peer-to-peer trading, smart contracts, and renewable-energy tokenisation. However, knowledge remains fragmented across technology, economics, digital finance, and public policy. This conceptual paper develops an integrated framework explaining how blockchain-enabled energy markets may improve efficiency, financial inclusion, energy access, and environmental …

[HTML] Block-as-a-Vote: A Framework Scaling Voting-Based Blockchain Consensus Protocols from Single-Model to Multi-Model

H Xiong, J Li - Applied Sciences, 2026

Blockchain consensus protocols lie at the core of blockchain systems and define how nodes process and finalize block confirmation, provide security guarantees for the system, and meanwhile influence the system performance. Improving the performance of blockchain consensus protocols while ensuring system security is a challenge. Many blockchain consensus protocols, while providing rigorous security guarantees, exhibit low performance. The primary reason is that they process blocks …

Compliance by design or law by decree? A comparative analysis of the tokenization of financial instruments

H Sadok, S Kassimi, EM AlQodsi, MEH El Maknouzi… - Frontiers in Blockchain, 2026

The tokenization of financial instruments—the conversion of assets into digital representations on distributed ledgers—represents a structural transformation of capital markets. While it promises a “compliance by design” paradigm where algorithmic code guarantees rights and minimizes trust costs, the academic literature often overlooks the fundamental paradox at its core: blockchain technology cannot independently resolve the legal uncertainty surrounding the nature of tokens or their …

Enhancing Graph Neural Network for Crytocuurency Anti-Money Laundering Using Community-Level Structural Information

LR Wijaya, AY Zakiyyah - … Conference on Information Technology and Computing …, 2026

This Cryptocurrency networks present significant challenges for Anti-Money Laundering (AML) due to pseudonymity, high transaction volumes, and transaction obfuscation techniques such as mixers and layered transfers. To address these challenges, this study aims to improve graph-based learning by incorporating community-level structural information into node representations. This study investigates the application of community-level structural information to existing …

[PDF] Fundamental Limits of Network Inference and Matching

T Ameen - 2026

Modern networked systems, from social media platforms and protein–protein interactomes to peerto-peer blockchains, share a common mathematical skeleton: agents interact pairwise, and both the resulting network and the observations arising from it are shaped by randomness. The theory of random graphs provides a unifying abstraction in which operational questions about real networks become statistical questions about latent structure. This thesis studies a suite of inference problems on …

Uporaba blockchain tehnologije za povečanje zaupanja v mednarodni dobavni verigi

T Ketiš - 2026

POVZETEK V magistrskem delu obravnavamo uporabo blockchain tehnologije kot možnega podpornega informacijskega mehanizma, ki lahko prek sledljivosti, preglednosti in revizijske sledi ustvarja pogoje za oblikovanje zaupanja v mednarodnih dobavnih verigah. Izhajamo iz problema, da so sodobne dobavne verige vse bolj globalne, večnivojske in informacijsko razdrobljene, kar otežuje preverjanje izvora izdelkov, spremljanje njihove poti, zagotavljanje kakovosti …

[PDF] Blockchain Technology for Enhancing the Reliability of Accounting Records

YH Ibrahim, HS Jabur - NIU Journal of Social Sciences, 2026

This study examines the role of blockchain technology in enhancing the reliability of accounting records and improving the quality of accounting information. This research addresses the challenges of data manipulation, information inaccuracy, and limited transparency in traditional accounting systems, with the aim of assessing how blockchain technology can enhance trust in financial information and improve auditing processes. The study adopts an analytical approach to examine the …

Digital Disruption in Finance: Unlocking Innovation with Block chain and Fintech Ecosystems.

S Yadav, TL Rao, S Das - Journal of Theoretical Accounting Research, 2026

The paper investigates how digital technologies affect the standard financial system through their blockchain and fintech technological developments. This study analyzes present academic works and industry examples and technical developments to examine how these technologies modify financial services and develop new market patterns while advancing financial accessibility. Through comprehensive study the research examines digital disruption's main influencing …

[PDF] SECURING MOBILE PAYMENT TRANSACTIONS THROUGH BIOMETRIC AND BLOCKCHAIN AUTHENTICATION APPROACHES

S Eschlberger - Journal ID

The exponential rise in mobile payment systems has introduced both convenience and significant security risks. Traditional authentication mechanisms such as passwords and PIN codes have become inadequate in preventing fraudulent

transactions. This paper explores the integration of biometric authentication and blockchain technologies as robust solutions to strengthen mobile payment security. Biometrics, including fingerprint, iris, and facial recognition, ensure unique user …
