[HTML] Blockchain for Digital Health Governance: Evidence Gap Map and Scoping Review

S Yaghobian, N Sulkowski, G Galambos, L Scarazzini… - Journal of Medical Internet …, 2026

Background Digital health increasingly depends on data exchange across institutions, technologies, and jurisdictions, creating persistent challenges for the governance of access, consent, interoperability, provenance, and accountability. Blockchain and distributed ledger technology (DLT) systems have been proposed as mechanisms for coordinating and verifying governance processes across distributed actors. However, existing research has examined individual applications or technical …

Efficient Attestation of Temporal Execution Integrity for Real-Time Collaborative Autonomous Systems

J Liang, X Zhang, X Li, Y Hou, Y Wang, Z Ren… - IEEE Transactions on …, 2026

Real-time collaborative autonomous systems rely on timely and trustworthy data exchanged among multiple embedded devices to coordinate safety-critical actions. While recent runtime attestation schemes have extended execution integrity verification to temporal properties in order to detect timing attacks, existing approaches incur substantial runtime and verification overhead. In particular, fine-grained store instruction instrumentation for log integrity and re-execution-based …

GPBchain: A GNN-Assisted Framework for Optimizing Sharding Blockchain Reconfiguration

K Zhang, X Wang, B Yi, M Huang, L Qiu - IEEE Transactions on Computers, 2026

Blockchain is widely regarded as the foundational infrastructure for Web3. However, its inherent scalability limitations hinder its ability to support large-scale Web3 applications. Sharding technology is one of the most promising approaches to deal with the scalability problem by partitioning accounts into separate shards and allowing each shard to handle a portion of transactions (TXs) in parallel. However, this approach inevitably introduces cross-shard TXs (CSTs), and minimizing CSTs …

[PDF] StOMR: Stateful Oblivious Message Retrieval

C Gouert, K Lee, D Mouris, Y Tselekounis, JL Watson - Cryptology ePrint Archive, 2026

Abstract Oblivious Message Retrieval (OMR) enables recipients to retrieve messages from an untrusted server without revealing which messages correspond to them. OMR is useful for privacy-preserving systems such as anonymous messaging and blockchains. Existing constructions are inherently built in the public-key setting and use Fully Homomorphic Encryption (FHE) to allow a detector to scan a public bulletin board and produce a compact encrypted digest containing only relevant …

[PDF] Programmable Local Currency on Chain: A Bond-Type Claim-Token Framework with Polygonal Geofencing and Settlement-Coupled Burn for Local Public-Fund …

SH Park, MK Lee, DH Oh - IEEE Access, 2026

Local currencies, such as Korea's Local-Love Gift Certificate (LLGC), direct public funds to defined regions. The LLGC program recorded an issuance volume of KRW 17.6 trillion in 2024, with 190 to 194 local governments operating it. National inspections reported 184, 194, and 271 enforcement findings over 2022–2024 [1, 2]. Existing centralized implementations rely on database reconciliation and administrative-code matching, leading to boundary misclassification and weak off …

Hybrid RDBMS–Blockchain Architectures for Auditability and Compliance: A Systematic Literature Review

SA Sutanto, P Yugopuspito - 2026 3rd International Conference on Technology …, 2026

Hybrid Relational Database Management System (RDBMS)–blockchain architectures address auditability and compliance in regulated enterprise environments; however, the existing literature remains fragmented. This study conducted a purposive literature review following the Preferred Reporting Items for Systematic Reviews and Meta-Analyses (PRISMA) 2020 guidelines, analyzing 60 studies (2015–2026) using a pre-specified two-stage protocol. Each study was …

FINTECH DAN INOVASI KEUANGAN

SY Kusumastuti, L Judijanto, K Chandra, YE Purba… - 2026

Buku “FINTECH DAN INOVASI KEUANGAN” membahas perkembangan teknologi finansial yang mendorong perubahan dalam layanan keuangan modern. Bab pertama menguraikan konsep dasar financial technology, karakteristik, perkembangan, serta perannya dalam mendukung aktivitas ekonomi. Selanjutnya, buku membahas ekosistem dan model bisnis fintech yang melibatkan perusahaan teknologi, lembaga keuangan, konsumen, regulator, serta berbagai pemangku …

Cybersecurity and Privacy in AI-Enabled Wearable Textile Systems

GP Dawange, P William - Heterogeneous Integration in E-Textiles: Flexible …, 2027

Artificial Intelligence has emerged as a pivotal advancement in textile systems, integrating intelligent sensing, wearable computing, IoT, and machine learning applications on smart fabrics for real-time monitoring of object behavior through predictive analytics. The primary areas of application identified in the investigation include healthcare, industrial safety, sports and fitness. Emerging domains represent; AI-enhanced wearable fabrics are perpetually evolving for ongoing patient …

[PDF] Blockchain-Enabled Forensics-by-Design: A Permissioned Blockchain Integration Solution for Digital Evidence Management Systems (PBCIS-DEMS)

B Mbimbi - 2026

The rapid expansion of cloud services, mobile platforms, and IoT environments has reshaped digital ecosystems, creating dynamic, distributed data that strain traditional forensic methods. Frameworks built for static on-premise systems struggle to preserve integrity, authenticity, and chain-of-custody when evidence comes from decentralized, cross-border sources. Thus, many current approaches fail to ensure transparency, tamper resistance, and legal admissibility. This thesis presents …

[PDF] PANORAMA NORMATIVO DA BLOCKCHAIN NO BRASIL:: DIREITO COMPARADO, INFLUÊNCIAS INTERNACIONAIS EA VIABILIZAÇÃO JURÍDICA DOS …

PR Spyridakis, TBP Gomes - Caderno Virtual, 2026

O presente artigo propõe uma análise comparada da relevância dos contratos autoexecutáveis, também conhecidos como contratos inteligentes, que são viabilizados pela tecnologia blockchain. O estudo aborda as perspectivas da União Europeia, Suíça e Brasil. A pesquisa busca investigar a importância da normatização da tecnologia blockchain para o contexto jurídico brasileiro e como as normas nacionais, em conjunto com influências normativas estrangeiras, contribuem …
