MPSC: A metamorphic testing approach based on mutable parameters for smart contracts

J Chen, Z Li, Q Feng, S Cai, C Sun, X Shi - Software Quality Journal, 2026

Blockchain-based smart contracts are difficult to test because explicit expected outputs are often unavailable, creating an oracle problem. Metamorphic testing addresses this problem by checking necessary relations between related executions, but existing approaches often depend on manually designed, contract-specific metamorphic relations (MRs) and provide limited support for MR selection. This paper proposes MPSC, a parameter-driven metamorphic testing approach for smart …

A Synergistic approach: blockchain-integrated machine learning based intrusion detection system for improving wireless network security

WM Elsayed - Neural Computing and Applications, 2026

Abstract Wireless Sensor Networks (WSNs) are inherently susceptible to a wide range of cyberattacks due to their distributed architecture, limited computational and energy resources, and deployment in unattended or hostile environments. To address these challenges, this paper proposes a blockchain-integrated machine learning (ML)-based Intrusion Detection System (IDS) specifically designed for resource-constrained WSNs. The proposed framework synergistically combines an …

Die Privatisierung der Geldpolitik: Bitcoin und Co.

R Sturm, T Winkelmann - Politik und Wirtschaft: Eine Einführung, 2026

Zusammenfassung Viele Strukturprobleme des Verhältnisses von Politik und Wirtschaft sind ungelöst. Umstritten bleibt der wirtschaftliche Strukturwandel in Ostdeutschland oder die Versöhnung von Ökologie und Ökonomie. Zunehmendes Gewicht gewinnt die Staatsverschuldung. Mit einer besseren Industriepolitik und einer größeren Attraktivität des Standorts Deutschland, nicht zuletzt wegen einer verbesserten Infrastruktur-und Energiepolitik soll die Interdependenz von Politik und …

[PDF] EXPLORING THE RELATIONSHIP BETWEEN FINANCIAL LITERACY AND SOCIAL MEDIA INFLUENCE IN SHAPING CRYPTOCURRENCY TRADING BEHAVIOUR …

RH Abbood, M Abbas, KTM Alkhasawneh, UT Ozkut… - Veredas do Direito, 2026

This study investigates the interrelationship between financial literacy and social media influence in shaping cryptocurrency trading behaviour among Iraqi youth. The rapid proliferation of digital technologies and social media platforms has created an unprecedented information ecosystem that influences individual financial decision-making, particularly among younger demographics in emerging economies such as Iraq. Despite the growing global interest in cryptocurrency markets, the behavioural …

QoS-Aware Secure Federated Intelligence for Biomedical Electronics and Medical Informatics in Wireless Health Monitoring Networks

A Kaliappan, K Tamilselvi, AT Ravi, SP Santhoshkumar… - Journal of Electronics …, 2026

Abstract Wireless Health Monitoring Networks (WHMNs) that utilize Biomedical Electronics (BMEs) are rapidly changing how medical information is gathered and used in contemporary Medical Informatics through providing ongoing, real-time, and remote assessment and monitoring of essential physiological parameters; including electrocardiogram (ECG), body temperature, blood oxygen saturation, and heart rate. A number of constraints can limit the practical implementation of WHMNs including …

[PDF] Large-scale Blockchain Prototyping on a Single Machine

S Qu, A Arpaci-Dusseau, R Arpaci-Dusseau

We present Chain-in-the-Box (CBox), an emulation-based prototyping and evaluation framework for blockchain systems. CBox modularizes blockchain systems using a staged event-driven model to facilitate prototyping and performance analysis. It enables large-scale testing on a single machine through various emulation techniques. We implemented four blockchain systems in CBox: Bitcoin, Diem, Aptos, and Avalanche. Our evaluation demonstrates that CBox can reliably emulate a …

[PDF] Τεχνολογίες κρυπτονομισμάτων: blockchain, εφαρμογές και κοινωνικοοικονομική επίδραση

I Μπαλκούρας - 2026

Η παρούσα διπλωματική εργασία πραγματεύεται την τεχνολογία των Κατανεμημένων Καθολικών (Distributed Ledger Technology-DLT) και το οικοσύστημα των κρυπτονομισμάτων, προσεγγίζοντάς τα όχι απλώς ως καινοτόμα χρηματοοικονομικά εργαλεία, αλλά πρωτίστως ως θεμελιώδεις υποδομές της σύγχρονης επιστήμης της πληροφορικής. Ο κύριος σκοπός της μελέτης είναι η εις βάθος τεχνική ανάλυση των μηχανισμών που καθιστούν δυνατή την αποκεντρωμένη μεταφορά αξίας και …

The foundations of Web 3.0: decentralization, blockchain, and smart contracts

K Nguyen, MT Le, PL Nguyen, H Sekiya

In recent years, we have been observing a shift from the platform-based Web 2.0 to the decentralized Web3, marking a significant change in how digital trust is built on the Internet. Power is moved from centralized intermediaries to clear, mathematically proven protocols. This chapter, which lays out the technical basics of the Web 3.0 stack, looks at the combination of Distributed Ledger Technology, cryptographic consensus, and programmable logic. We examine the movement from closed to …

[PDF] Bitcoin as a store of value: a systematic analysis of economic theory and legal implications under European Union law

D Illanes Aspée - 2026

This thesis adopts a qualitative, theoretical, documentary and comparative methodology, in order to examine whether Bitcoin can be understood as a store of value and analyzes the legal implications in the EU that arise from its regulation. The study begins by tracing the historical evolution of money, showing how monetary forms have repeatedly adapted in response to technological change, institutional constraints, and failures of existing systems. Building on this background, the paper …

[PDF] Tax Evasion in Integrated Fiscal and Electronic Payment Systems: Vulnerabilities, Detection, and Mitigation in the Greek Digital Tax Ecosystem

P Mavridis, AT Baklezos, N Kapsalis, CD Nikolopoulos - 2026

Greece has developed a highly digitized fiscal ecosystem combining Fiscal Electronic Mechanisms (FEMs), Electronic Funds Transfer at Point-of-Sale (EFTPOS) terminals, the central FEM information system eSEND, the myDATA reporting

platform, Enterprise Resource Planning (ERP) systems, and Electronic Invoicing Provider Services (EIPS). This paper provides an integrated technical analysis of this ecosystem, extending previous work on hash-chain and blockchain-like integrity …
