The First 3D Integrated Web-Based Seft-Visualization Blockchain Structure

AK Ngo-Ho, HD Thach, AK Ngo-Ho - Asia-Pacific Web (APWeb) and Web-Age ..., 2026

The integration of 3D digital assets into the blockchain ecosystem has traditionally been limited to simple storage and metadata association, often referred to as Level 1 and Level 2 implementation. However, the critical challenge of direct, real-time visualization, defined here as Level 3, remains largely unaddressed due to the lack of native rendering support in decentralized environments. This paper proposes a novel, integrated system for the secure visualization of encrypted 3D models ...

**[PDF] An Improved Secure Blockchain-Based Remote Patient Monitoring System With Role-Based Access Control Using IPFS**

HM Le, Ö Öksüz - Concurrency and Computation: Practice and ..., 2026

This work presents a privacy-preserving remote healthcare system that integrates blockchain technology with a root seed-based pseudonymization mechanism and lightweight cryptographic controls. Addressing the privacy risks of public ledgers and the limited computational resources of medical IoT devices, the proposed system focuses strictly on identity unlinkability and metadata-linkage prevention against public observers while maintaining zero-encryption plaintext data pipelines to ...

**A Novel Programmable Block Ownership: Unified Visual Integration of Static NFT Assets and Dynamic Subscriber-Controlled Administrative Data in Blockchain**

AK Ngo-Ho, BN Pham, AK Ngo-Ho - Asia-Pacific Web (APWeb) and Web-Age ..., 2026

This study proposes a novel blockchain-based framework designed to bridge the gap between static digital assets and dynamic administrative data, specifically tailored for high-value electronic records such as vehicle registrations and land titles. While traditional Non-Fungible Tokens (NFTs) excel at securing static content, they often lack the flexibility to incorporate evolving regulatory information without losing their on-chain integrity. Our system introduces a unique Programmable Block ...

**[PDF] Cryptography for Blockchain Systems in the Post-Quantum Era: A Comprehensive Review of Primitives, Consensus Security, Privacy, Cloud Integration, Applications ...**

SA Khan, MZ Ali, HN Siddiqui, AH Raza, M Iqbal...

Blockchain technology secures shared ledgers among mutually distrusting parties by combining distributed consensus with a small set of cryptographic mechanisms, and every property that makes a blockchain trustworthy, from tamper evidence to transaction authenticity, ultimately rests on cryptographic assumptions. This review systematically examines those foundations and the pressures now reshaping them. Drawing on 258 sources that span foundational cryptography, standards, and recent ...

**Trustworthy and Efficient Blockchain Mechanisms for Resource-Constrained Distributed Networks**

J Zhang - 2026

Blockchains offer decentralized trust, but this trust is often purchased through repeated verification, broad transaction propagation, replicated storage, and costly consensus. These overheads are difficult to sustain in distributed environments where nodes differ in computation, bandwidth, storage, mobility, and reliability. In this dissertation, I study how blockchain systems can preserve accountability while reducing unnecessary work in practical networked settings.

Transformer-Based Language Models for Bitcoin Market Prediction and Interpretation

E Gozebina - 2026

In the context of a Master's thesis in applied mathematics, this work investigates compact transformer-based language models as an instrument for Bitcoin-related predictions and decision support. The work connects three topics: the structure of the Bitcoin system and its data, the mathematical and algorithmic foundations of deep autoregressive transformers, and the design of practical training pipelines for financial applications. On this foundation, a reproducible ETL pipeline for Bitcoin ...

[PDF] A blokklánc termelékenységi paradoxona: értékteremtés, szervezeti bizalom és adaptációs gátak a vállalati gyakorlatban

P Nagy - 2026

A huszonegyedik század világgazdaságát meghatározó digitális transzformáció egyik leginkább innovatív technológiai pillére a blokklánc, amely napjainkra a kriptovaluták árnyékából kilépve a vállalati versenyképesség potenciális kulcstényezőjévé vált. A technológia alapvető ígérete a globális gazdasági rendszerek működését terhelő bizalomhiány és az ebből fakadó tranzakciós súrlódás minimalizálása egy decentralizált, megmásíthatatlan és transzparens ...

[PDF] Monetarna politika Sustava federalnih rezervi i kretanja na tržištu kriptovaluta

F Bastalić - 2026

SAŽETAK U ovom diplomskom radu analizira se povezanost između monetarne politike Sustava federalnih rezervi i kretanja na tržištu kriptovaluta, s posebnim naglaskom na kanale putem kojih komunikacija i odluke Federalnih rezervi mogu utjecati na cijene tržišta kriptovaluta i raspoloženje ulagača na istom. Prvo se opisuje Sustav federalnih rezervi, njegova institucionalna struktura, ciljevi i instrumenti bitni za provođenje monetarne politike, uloga Federalnog odbora za otvoreno tržište i ...

[PDF] A BLOCKCHAIN-ORIENTED MODEL FOR ELECTRONIC VOTING WITH BIOMETRIC VOTER IDENTIFICATION AND DEEPFAKE-RESISTANT AUTHENTICATION

T Aidynov, D Satybaldina, W Dimitrov, G Abisheva - Herald of the Kazakh-British ..., 2026

This paper presents and experimentally validates an electronic voting model that stores results in a decentralized blockchain while using biometric voter verification and automatic detection of synthetically generated (deepfake) facial images. For identity verification, Vision Transformer and ResNet-50 architectures are fine-tuned with Low-Rank Adaptation (LoRA). Frequency-domain information from the Fast Fourier Transform (FFT) is also included as a descriptor for detecting synthetic ...

[PDF] Soberanía Digital en Redes Sociales: Desarrollo de una Plataforma Descentralizada P2P

A Lillo Lindo - 2026

El domini de les plataformes de xarxes socials basades en arquitectures centralitzades ha creat un ecosistema digital en què la propietat de les dades i la llibertat d'expressió estan subordinades als interessos corporatius. Aquest projecte de fi d'estudis presenta una alternativa a aquest model a través del disseny i la implementació de You, una xarxa social descentralitzada. El projecte explora els fonaments de les xarxes distribuïdes i la tecnologia Peer-to-Peer (P2P) per construir ...
