[\[PDF\] Cryptocurrency investment intention among youth entrepreneurs in Mogadishu, Somalia: an extended theory of planned behaviour approach](#)[A Salah Abdulle, HM Ahmed, FM Hussein, BA Nor - Cogent Business & Management, 2026](#)

Cryptocurrency investment has become a risky area of digital finance, especially for youth entrepreneurs in fragile economies where formal financial systems and investor-protection mechanisms remain limited. In Somalia, the growth of digital finance and mobile-money use has generated interest in cryptocurrency, yet little is known about the factors shaping young entrepreneurs' investment intentions. This study examined cryptocurrency investment intention among 385 youth entrepreneurs ...

**[A Trusted Audit Architecture Using CP-ABE and Lightweight Blockchain for Industry 4.0](#)**[Z Nie, Z Ji, L Zhang - Applied Sciences, 2026](#)

The deep integration of Cyber-Physical Systems (CPSs) and embedded devices within Industry 4.0 has intensified security risks, particularly concerning data integrity and access control in resource-constrained environments. While blockchain offers decentralized trust for industrial infrastructures, its computational intensity poses significant challenges to the performance and security of embedded platforms. To address these issues, this paper proposes a lightweight, blockchain-based security ...

**[Blockchain-Enabled Smart Contracts: Architecture, Applications, Security Challenges, and Future Directions](#)**[HN Gadbail, R Rewatkar, N Kamdi, BS Bharat... - ... International Conference on ..., 2026](#)

Blockchain technology has expanded from a system of verifying and recording peer-to-peer cryptocurrency transactions to a general-purpose system that has the capability to execute self-enforcing agreements in a digital form, called a smart contract. Smart Contracts remove the need for a trusted third party by decentralizing the terms of contract between all nodes on a distributed network and distributing and verifying them as executable code. In this paper, three complementary research ...

**[A Two-Layer Blockchain and Machine-Learning Framework for Social-Media Identity Authentication and Fake-Profile Detection](#)**[P Malathi, R Jothika, M Maheswari, P Gokiladevi... - 2026 7th International ..., 2026](#)

Fake social-media profiles-bots, spam accounts, sockpuppets, and duplicated identities-spread disinformation, enable fraud, and erode trust, and the centralized verification that platforms run today is both a single point of failure and opaque to the user whose data it holds. This paper presents a framework that authenticates identities and detects fakes through two complementary layers. A blockchain layer issues each user a self-sovereign decentralized identifier and verifiable credential ...

**[Engineering Activism Corporate Diversity, Worker Organizing, and “Good” Tech in a Post-2020 Silicon Valley](#)**[KC Kim - 2026](#)

This dissertation explores the various methods tech workers employ to shape the industry according to their visions of justice and equality. While it is generally agreed upon in tech activist circles that their industry is sexist, racist, and exploitative, there is less consensus on how these inequalities are deployed, and even less consensus on how to solve them. But through the social justice movements of the 2020s, including Black Lives Matter, #MeToo, and anti-fascism and anti-military movements ...

Security With Decentralization

E Memary - 2026

Each new technology has impacted our lives and will impact the future. Technology has made human life easier since it helps us to travel, communicate, learn, and do business more simply, as well as live comfortably. In such an increasingly interconnected environment, the number and variety of security risks are growing. Threats such as computer hacking, malicious codes, and denial-of-service attacks have become common and more sophisticated to tackle. Therefore, it is harder for ...

A Hierarchical Attribute-Based Encryption Framework Integrated with Blockchain for Secure Data Sharing in Industrial IoT

C Naveen, J Kumar, K Shailaja, GV Murthy - 2026 7th International Conference On ..., 2026

The development of the Industrial Internet of Things (IIoT) results in colossal amounts of vulnerable operational data that needs to be exchanged safely in distributed logistics networks. Centralized cloud architectures introduce latency, scalability, and privacy bottlenecks. This paper proposes a decentralized hierarchical attribute-based encryption (HABE) scheme that combines edge computing and blockchain to enable privacy-aware, secure data sharing in smart-logistics systems. The system ...

La tokenización de activos reales mediante los NFTs: un análisis de sus implicaciones financieras y operacionales en la economía digital

B Moreno Manzano - 2026

Resumen [ES] El presente Trabajo de Fin de Grado se enmarca en el sector de las finanzas digitales y la tecnología financiera (Fintech), abordando como problema central las ineficiencias y barreras críticas de los mercados patrimoniales e inmobiliarios tradicionales: elevadas barreras de entrada por la indivisibilidad de los activos, altos costes de fricción transaccional (notaría y registros) y una acusada asimetría de información que ralentiza la transmisión del capital. Ante este ...
