Federated Explainable Artificial Intelligence Framework for Privacy-Preserving Industrial Risk Assessment in Smart Manufacturing Ecosystems

JP PM, HM Akshatha, BK Sagar, K Apoorva - 2026 International Conference on ..., 2026

The rapid adoption of Industry 4.0 technologies, Industrial Internet of Things (IIoT), cyber-physical systems, and intelligent automation has significantly transformed modern smart manufacturing ecosystems. However, the increasing interconnectivity of industrial devices and distributed production infrastructures has introduced critical challenges related to industrial risk assessment, data privacy, cybersecurity, model transparency, and trustworthy decision-making. Traditional centralized Artificial ...

I Nurdiana - 2026

Platform ini hadir sebagai respons radikal terhadap kerentanan privasi pada ekosistem komunikasi digital yang kian eksploitatif. Di balik janji keamanan absolut, ia membangun sekat informasi yang memisahkan data sensitif dari pengawasan pihak eksternal secara sistematis. Namun, sentralisasi komunikasi dalam protokol tertutup ini menciptakan ketergantungan teknologi yang berisiko bagi struktur operasional organisasi. Tanda mengubah lanskap kolaborasi profesional dengan ...

MF Kalathingal, RC Anish, SJ Kurian, C Jacob - 2026 International Conference on ..., 2026

Land registration and property transfer, particularly in rapidly developing regions like Kerala, remain highly complex, paper-intensive processes that are alarmingly vulnerable to fraud, document tampering, and bureaucratic delays. Traditional centralized land registries frequently face structural issues with data silos, mismanagement, and limited public transparency, leaving legitimate property owners exposed to protracted legal disputes. This paper introduces LandVault Kerala, an ...

M Lambard, C Bertelle, C Duvallet - Proceedings of the 8th International Conference ..., 2026

Traditional contracts face challenges in transparency, complexity, intermediaries, and costs. Blockchain and smart contracts offer decentralized, transparent, and tamper-proof mechanisms. However, their technical nature creates accessibility barriers for domain experts, like legal practitioners, hindering adoption. This paper introduces an approach to automatically generate smart contracts by modeling real-world agreements as multi level finite state machines. This model is generic ...

A Ferjani, N Kerne, C Duvallet, C Bertelle - ... of the 8th International Conference on ..., 2026

Blockchain systems are inherently complex and decentral-ized, making them challenging to analyze using traditional analytical approaches. Among the key components influencing blockchain dynamics is miner behavior, particularly their strategic decisions regarding participation in mining pools. These choices directly

affect the performance, security, and decentralization of proof of work blockchains. In this paper, we present a simulation framework based on a multi-agent modelling ...

[\[PDF\] Blockchain-based Land Registration and Ownership Management System with AI-Assisted Document Verification](#)

[R Regmi](#), [DC Dipesh](#), [B Aryal](#), [P Subedi](#) - ... of International Conference on Innovation in ..., 2026

Land registration in Nepal relies on a paper-intensive process requiring repeated visits to government offices, with limited transparency and a high risk of document tampering. This paper presents a blockchain-based land registration and ownership management ecosystem that digitizes the workflow while preserving the legally mandated physical and biometric verification of the Land Revenue Office. Citizens submit applications, complete KYC, and upload documents online, while verification ...
