A novel framework for enhancing energy efficiencies and sustainability using Algorand blockchain-based competitive Negawatt Model in Virtual Power Plants

A Bedi, J Ramprabhakar, M Mudassir, N Varma… - Computers and Electrical …, 2026

The rapid growth of renewable energy sources, distributed energy resources (DERs), microgrids, smart grids, energy storage, and controllable loads has increased the complexity of grid coordination, making centralized power systems inefficient and vulnerable to scalability, transparency, and trust limitations. Virtual Power Plants (VPP) offer a promising and viable framework for coordinating underlying microgrids, smart grids, and DERs, however, enabling secure market participation, incentivizing …

Tokenized remittance governance in Lebanon's financial crisis: a compliance-by-design framework

I Chehade, A Merhi, H Alqaralleh, C Baalbaki - Digital Policy, Regulation and …, 2026

Purpose This study aims to examine how tokenized remittance infrastructure can be governed in crisis-affected economies where domestic financial institutions have lost credibility. Existing studies often examine cryptocurrencies, stablecoins and Central Bank Digital Currencies (CBDCs) as separate instruments, with less attention to how remittance-focused tokenization can be governed under crisis conditions. Focusing on Lebanon, the study develops a compliance-by-design framework built around …

[HTML] Enhancing Information Exchange in Distributed Manufacturing Through Blockchain Integration

V Vythoulka, M Katsigiannis, M Pantelidakis - Manufacturing Letters, 2026

Distributed Manufacturing (DM) represents a paradigm shift from centralized production toward a network of digitally connected, smaller-scale facilities capable of producing goods closer to the point of use. Industry 4.0 technologies act as catalyzers for DM and enable adaptive and highly customized production, capable of rapid response to customer demand fluctuations. This work explores the integration of blockchain into a DM system. Blockchain technology offers transparency …

[PDF] Risk level of blockchain-related barriers in contract management within the Polish construction industry

O Ogunniyi, A Akindeinde, L Ojo, O Ilesanmi - Construction Economics and Building, 2026

A significant research gap exists in understanding how blockchain-related barriers affect contract management in the Polish construction industry, particularly in terms of the risks that these barriers pose to implementation. The aim of this study was to identify the key barriers to blockchain adoption and to evaluate the risk level associated with each barrier. Using the failure mode and effects analysis (FMEA) approach, a systematic review of the literature published between 2015 and 2024 …

[PDF] Legally-Relevant Smart Contracts on a Stateful Blockchain

S Avanzo, V Dwivedi, A Norta, A Kormiltsyn… - Proceedings of the 2026 …, 2026

In the Machine-to-Everything (M2X) economy, machines, organizations, and people transact autonomously across organizational boundaries. Smart contracts, which are programs that execute the terms of an agreement on a blockchain, are central to this vision because they provide the transparency and security that such coordination requires. In regulated domains, however, a smart contract is useful only if it is also legally relevant: recognizable and enforceable as an agreement in law. Two …

Protocol-level energy accounting for blockchain: A per-block analytical framework

N Kandwal, KL Agarwal, D Upadhyay - Journal of Renewable and Sustainable …, 2026

The per-transaction energy metric, introduced by de Vries [Joule 2 (5), 801–805 (2018)] and S. Köhler and M. Pizzol [Environ. Sci. Technol. 53 (23), 13598–13606 (2019)], models network energy consumption as a linear function of transaction throughput. As on-chain data have matured, the applicable scope of this metric at the protocol level can now be examined directly; this study does so and proposes a complementary unit grounded in block production mechanics. Using 24 136 052 …

Exploring Generational Attitudes Toward Blockchain in Indonesian Audit Firms

M Rizky, DD Ramadhani, BL Handoko - 2026 13th International Conference on ICT …, 2026

Blockchain is one of the new digital technologies that audit companies are using as part of their attempts to strengthen governance due to the growing need for accountability and transparency. This study aims to examine the factors influencing auditors' intention to adopt blockchain technology within Indonesian audit firms. The study uses the Unified Theory of Acceptance and Use of Technology and the Diffusion of Innovation framework to explain adoption behavior. A quantitative …

Effects of Macroeconomic Data on Bitcoin Price Prediction using Time Series Forecasting

N Bryan, K Krixiadi, R Alexander, NN Qomariyah… - 2026 13th International …, 2026

As Bitcoin evolves from a peer-to-peer transaction system into a widely traded financial asset, its price movements are increasingly influenced by broader market conditions and macroeconomic signals. This paper investigates whether incorporating continuous macroeconomic variables changes Bitcoin price prediction accuracy in multivariate time series forecasting techniques. A comparative experiment is conducted using LSTM, XGBoost, GRU, TCN, and GRU-based …

[PDF] Механізми сталого розвитку економічних систем в умовах воєнних дій та післявоєнного відновлення

ІВ Замула, ДМ Захаров, ГВ Кірейцева, СФ Легенчук… - 2026

Монографія присвячена комплексному дослідженню механізмів сталого розвитку економічних систем в умовах воєнних дій та післявоєнного відновлення. Розглянуто теоретико-методологічну архітектуру обліку в імперативах сталого розвитку, ESG-трансформацію та звітність зі сталого розвитку як елементи євроінтеграції, екологічний менеджмент і ревіталізацію природного капіталу. Досліджено циркулярну економіку як парадигму безвідходного відновлення …

[PDF] The Dark Side of Digital Finance?: Cryptocurrency Adoption and Money Laundering under Weak Institutional Enforcement in Colombia

SA Caroline, AD Esat, K Nexhat, K Anatoljis - Public Governance, Administration and …, 2026

Abstract Cryptocurrency adoption in Latin America has accelerated in recent years. Given that Colombia ranks second in the region in terms of transaction value received between 2023 and 2025, this study explores the drivers of total cryptocurrency transaction volume and how effective anti-money laundering (AML) policies in Colombia are under institutional weakness conditions. Using a heteroskedasticity-and autocorrelation consistent generalised method of moments …
