[SecMine: A private PoW method using witness encryption scheme](#)

[SB Far, AI Rad, MRC Qazani - Computer Networks, 2026](#)

Abstract Traditional Proof-of-Work (PoW) blockchains expose miner identities through publicly visible coinbase transactions, enabling financial surveillance, targeted attacks, and regulatory overreach. While prior privacy-enhancing techniques protect transaction flows (eg, ring signatures, zk-SNARKs, stealth addresses), they leave the consensus-layer reward mechanism entirely transparent. This paper introduces SecMine, the first PoW paradigm that achieves consensus ...

[\[HTML\] Blockchain-enabled hybrid CNN–Transformer framework with Integrated Gradients for Parkinson's disease detection](#)

[RB Kalathoti, SN Mohanty - Egyptian Informatics Journal, 2026](#)

Parkinson's disease (PD) is a progressive neurodegenerative disorder characterized by motor impairments such as tremor, rigidity, bradykinesia, and gait instability. Accurate and early detection remains challenging due to the complex temporal nature of wearable sensor signals, limited interpretability of deep learning models, and concerns regarding medical data integrity. This study proposes a novel Blockchain-Enabled Hybrid CNN–Transformer framework with Integrated Gradients ...

[Blockchain-based Food Supply Chain: Trend Mapping through Bibliometric Analysis](#)

[SS Hatim, MA Bazel, AGSA Gaid, AO Baarimah... - 2026 6th International ..., 2026](#)

Blockchain technology (BCT) has garnered substantial regard within the food industry due to its ability to address critical concerns of traceability, transparency, and food safety. As research in this area continues to expand rapidly, a comprehensive understanding of the evolving landscape, current research status, and future directions in BCT applications within the food supply chain becomes imperative. This paper aims to conduct a bibliometric analysis to map the trends and research ...

[\[PDF\] Melindungi Harta di Blockchain: Hifz al-Mal sebagai Rechtsidee dalam Pengaturan Penipuan Investasi Kripto di Indonesia](#)

[MP Anjani, M Rosyid - Binamulia Hukum, 2026](#)

Kemajuan pesat teknologi digital telah mendorong perkembangan ekosistem investasi mata uang kripto di Indonesia, sekaligus memicu maraknya penipuan investasi kripto yang belum ditangani secara memadai melalui instrumen hukum pidana positif. Artikel ini bertujuan menganalisis kekosongan norma dalam penanganan tindak pidana penipuan investasi kripto dari perspektif hukum pidana positif Indonesia dan hukum pidana Islam. Penelitian ini menggunakan metode ...

[Singa Fintech: Pendanaan Cepat dan Terpercaya untuk Mendukung Langkah Produktif Anda](#)

[R Dewi - 2026](#)

Buku berjudul Singa Fintech: Pendanaan Cepat dan Terpercaya untuk Mendukung

Langkah Produktif Anda merupakan sebuah karya komprehensif yang hadir sebagai oase di tengah dinamika perkembangan teknologi keuangan yang begitu pesat namun sering kali masih diselimuti oleh keraguan masyarakat. Di era digital saat ini, kebutuhan akan akses permodalan yang cepat dan efisien telah menjadi tulang punggung bagi pergerakan ekonomi, baik dalam skala individu maupun pelaku ...

Accountable fair exchange protocols on blockchain

R Mochizuki, R Abe, S Suzuki - 2026 IEEE 50th Annual Computers, Software, and ..., 2026

Fair exchange protocols on blockchain enable an atomic exchange of digital goods and cryptocurrency between untrusted parties. Two prominent protocols, Zero-Knowledge Contingent Payment (ZKCP) and FairSwap, guarantee fairness: either both parties receive the expected items (digital goods and cryptocurrency) or neither does. However, both protocols lack accountability: when an exchange terminates abnormally, the protocol cannot identify which party caused the failure. This lack of ...

Don't Swap Horses in Midstream: A Centralization Study of Uniswap on Ethereum

M Loporchio, DDF Maesa, L Ricci - 2026 IEEE 50th Annual Computers, Software ..., 2026

Uniswap is regarded as the leading decentralized exchange (DEX) platform, allowing users to trade (ie, swap) one asset for another without intermediaries, thanks to blockchain technology. The platform consists of smart contracts holding asset reserves, called liquidity pools, and its widespread adoption constitutes an opportunity for assessing whether the promises of decentralization of DEXes are effectively fulfilled in practice. For this reason, in this paper we propose an analysis of ...

Beyond Rollback: Error Semantics for Irrevocable State Transitions in Decentralized Finance

A Twabi, Y Ding, T Kondo - 2026 IEEE 50th Annual Computers, Software, and ..., 2026

Decentralized Finance (DeFi) transactions break classical transaction assumptions: failures are permanent, visible, and costly due to immutable ledgers and non-refundable gas fees. We present a concise framework for DeFi error semantics via: (1) a state divergence failure model for simulation-execution mismatches from state changes; (2) a triple-phase transaction pattern (Simulate, Execute, Reconcile), making outcomes observable only after post-execution log analysis; and (3) a ...

Research on Anti-Tampering Mechanism of Digital Calibration Certificate Based on Hash Chain and Blockchain for Geometric Parameter Calibration

P Ma, S LIU - ... Intelligence and Digital Applications: Proceedings of ...

Geometric parameter calibration forms the cornerstone of high-tech fields such as precision manufacturing and aerospace. The integrity and trustworthiness of its digital calibration certificates directly impact product quality, system safety, and international mutual recognition. To address the core pain points of traditional electronic calibration certificates—susceptibility to tampering, lack of fine-grained verification capabilities, and difficulty in establishing cross-organizational trust—this ...

Towards Future Wholesale Payment Systems

KS Dehui - 2025

Wholesale payment systems are vital financial market infrastructures that facilitate the movement of trillions of dollars annually. With the rising popularity of decentralized finance (DeFi) and blockchain technologies, there has been significant interest among central banks and financial institutions in incorporating elements of blockchain into wholesale payment systems. This thesis explores the role and value of blockchain in the context of wholesale payment systems.
