[PDF] A governance-based framework for Blockchain adoption in construction data management

ND Wijesundara, M Thayaparan, T Ayodele… - International Journal of …, 2026

Construction projects generate extensive project information; however, construction data management (CDM) remains fragmented, insecure, and weakly governed, particularly in developing economies. Empirical evidence on blockchain (BC) as an integrated governance infrastructure for CDM remains limited in such contexts. This study investigates the perceived potential of BC to address CDM challenges in the Sri Lankan construction industry and develops a Blockchain Adoption Decision …

[PDF] Blockchain Security: An Empirical Evaluation of High-Impact Exploits and Detection Tools

AR Raza, S Tahir, MA Bilal, A Ahmed, J Khan, H Afzal - Security and Privacy, 2026

Blockchain introduced secure, peer-to-peer transactions in decentralized environments without reliance on central authorities. However, attackers continue to exploit blockchain projects. Over the past decade, reported blockchain exploit losses have exceeded $24 billion. Although existing research analyzes blockchain vulnerabilities and real-world incidents, many studies focus on specific vulnerability classes or smart contract issues only. Therefore, we present an empirical study of …

The Traveling Robot: Autonomous Economic Agency in the Wild

IS Cardenas, JH Kim - 2026 IEEE 35th International Conference on Robot and …, 2026

What happens when a robot can pay for its own survival? We introduce the Traveling Robot project, a physically embodied robot with a digital wallet, smart contracts, and an onboard large language model (LLM) agent that can negotiate face-to-face financial transactions in uncontrolled human environments. Our prior work introduced the first robot cryptocurrency wallet in 2018 [1] and formalized the field in 2020 [2]; building on this and recent agentic payment protocols, this paper …

[PDF] Quantile-Based Frequency Connectedness between Cryptocurrencies and Industrial Metal Markets: The Role of Palladium Returns

E Ebynah, B Nyarko, S Agbeblewu, ENA Amarteifio… - International Journal of …, 2026

This paper aims to examine the quantile-based frequency connectedness between cryptocurrencies and palladium returns across different market conditions and investment horizons. In this paper, it is also aimed to evaluate the asymmetric and time-varying spillover dynamics between cryptocurrency markets and palladium returns in order to determine their diversification, hedging, and safe-haven characteristics. The study discussed the Heterogeneous Market Hypothesis together …

[PDF] Platinum–Cryptocurrency Connectedness at Quantile Frequencies: Evidence from Industrial Metal Markets

S Agbeblewu, TO Olubiyi, ENA Amarteifio, E Ebynah… - International Journal of …, 2026

This paper aims to examine the quantile-based frequency connectedness between cryptocurrencies and platinum returns across different market conditions and investment horizons. In this paper, it is also aimed to evaluate the asymmetric and time-varying spillover effects between cryptocurrency markets and platinum returns within short-, medium-, and long-term horizons. The study discussed the Heterogeneous Market Hypothesis together with the concepts of cryptocurrencies …

[PDF] Connectedness of cryptocurrencies and silver returns: Evidence from frequency-dependent quantile regressions

E Ebynah, IC Otoo, S Agbeblewu, B Nyarko, GA Idan - International Journal of …, 2026

This paper examined the connectedness between silver returns and major cryptocurrencies, with particular attention to their predictive ability and their roles as hedging, safe-haven, and diversification instruments across varying market conditions and investment horizons. In this paper, it is also aimed to evaluate how these relationships evolve across different quantiles and frequency domains, thereby capturing both distributional asymmetries and time-dependent dynamics. We …

[PDF] Quantile-Based Frequency Connectedness between Cryptocurrencies and Industrial Metal Markets: Evidence from Copper Returns

E Ebynah, S Agbeblewu, B Nyarko, ENA Amarteifio - International Journal of …, 2026

This paper examined the connectedness between Copper returns and major cryptocurrency returns, with particular attention to their predictive ability and their roles in diversification and risk transmission across varying market conditions and investment horizons. In this study, it is also aimed to evaluate how these relationships evolve across different quantiles and frequency domains, thereby capturing both distributional asymmetries and time-dependent dynamics. We …

[PDF] Efficient Cryptographic Protocols for Blockchain Systems

A Kavousi - 2026

Maximal Extractable Value (MEV) has emerged as a fundamental challenge in blockchain systems, particularly within Decentralized Finance (DeFi) ecosystems such as decentralized exchanges and lending protocols. MEV primarily arises when participants gain a disproportionate advantage through early access to information or unilateral control over transaction sequencing. This enables strategic behaviors—such as front-running user trades and exploiting arbitrage opportunities—that …

Hybrid Privacy-Preserving Blockchain Authorization for Cloud Environments

GK Kaur, R Kaur, J Singh - 2026 International Conference on Advancements in …, 2026

Cloud environment has become an integral part the modern day industry, offering scalable and on-demand services that significantly reduce computational and storage overheads for users and organizations alike. However, the centralized nature of traditional cloud access control mechanisms introduces significant security vulnerabilities, including susceptibility to insider threats, data tampering, and unauthorized data breaches, thereby necessitating robust, decentralized solutions …

Enhancing Security in IoT Devices through Blockchain Integration

P Banerjee, A Faraz, S Suman, M Kumar, P Diwan… - … International Conference on …, 2026

Abstract The Internet of Things has become part of how people work, move, and live. Sensors, smartphones, smartwatches, vehicles, and home appliances are all connected and all generate data that travels somewhere. The security and privacy of that data is the open question. Centralised security architectures struggle to scale

with the number of devices in play, and the trust assumptions they rely on are brittle once a single point of failure is breached. This paper looks at how blockchain …
