Evaluating cryptocurrency as a pricing mechanism: Impact of transaction anonymity and price volatility[X Zhang, X Fan - International Review of Financial Analysis, 2026](#)

This paper explores the role of cryptocurrency as a pricing currency within a DSGE framework, focusing on its potential to become payment method and policy implication. We analyze two distinct pricing rules: currency-based demand function, where prices are set based on an emphasis on currency demand, and the standard consumption-based demand function. Our model incorporates cryptocurrency price volatility and transaction anonymity. Our findings indicate cryptocurrency's ...

**[PDF] Interplay of NFT Trade and Ownership Dynamics: Tokenization Trends in the Digital Economy**[WA Duti, NR Radea, A Alamsyah - Journal of Social Computing, 2026](#)

Non-Fungible Tokens (NFTs) have transformed digital asset markets by enabling verifiable ownership of unique items on the blockchain. However, while these platforms promote decentralization, emerging patterns suggest centralization in asset accumulation and trading activity. This study investigates the structure and dynamics of NFT ecosystems by constructing and analyzing two distinct but complementary network models: the NFT trade network and the NFT ownership network. Drawing ...

**The maturity architecture of emerging digital infrastructures: evidence from blockchain**[P Mattos, WN Picoto, CD Pedron - SN Business & Economics, 2026](#)

Research on blockchain adoption has accumulated rapidly, yet its accumulation has remained largely domain-specific, offering limited insight into why institutionalization accelerates in some contexts yet stalls in others. Drawing on a corpus of 516 peer-reviewed articles spanning 2019 to 2025, this article develops a maturity architecture through a multi-layered mechanism-discovery design that integrates co-occurrence mapping, factorial correspondence analysis, longitudinal segmentation, and co ...

**[PDF] Transparent Identity Verification Approach Using MPC and Efficient Credential Status Handling**[I Ahmed, S Kasahara, K Toyoda, T Nakano, TH Tran - arXiv preprint arXiv ..., 2026](#)

A secure and privacy-preserving identity verification process is essential for digital ecosystems. Current eKYC frameworks that rely on Zero-Knowledge Proofs (ZKPs) face high computational cost, rigid circuit design, complex integration, and expensive on-chain verification. The W3C 2021 BitString-based credential status mechanism also suffers from inefficient updates and poor scalability in large-scale deployments. We propose a transparent and cost-effective identity verification framework based on ...

**Healthcare Applications of Blockchain—AI Collaboration**[R Kamal, P Upadhyay - Decentralized Collaborative Learning for Data Privacy ..., 2026](#)

The combining blockchain technology with artificial intelligence is increasingly being considered as a better way to handle all issues in the medical field, including data

security, interoperability, clinical practice decision making, and the most effective means of achieving patient-centered care. While blockchain offers a decentralized, open network architecture that ensures data security, artificial intelligence makes it simpler to analyze complex data sets, including sensor, imaging, and electronic ...

[\[PDF\] Blockchain Inspired Fault Monitoring And Event Recording In Medium Voltage DC Distribution Systems](#)

R Nandigam, G Sivarajan, VK Maddipati - *International Journal of Artificial ...*, 2026

Fault management in medium-voltage direct-current (MVDC) networks requires coordination between event detection, operational response, and event-history maintenance. This paper presents a blockchain-inspired framework and a MATLAB App Designer prototype for examining these functions. A ten-node network is represented by a random symmetric adjacency matrix, while simulated voltage changes and fault indicators drive predefined response rules. The interface ...

[\[PDF\] Modeling Cryptocurrency Returns with Generalized Hyperbolic Distributions: Estimation, Diagnostics, and Model Comparison](#)

A Nzokem - 2026

Bitcoin and Ethereum exhibit distinct distributional characteristics that warrant asset-specific modeling. This study fits the five-parameter generalized hyperbolic (GH) distribution to daily returns for both cryptocurrencies using maximum likelihood estimation. The estimation procedure is evaluated through convergence analysis, score-function assessment, and verification of the Hessian eigenvalues. Based on the maximized log-likelihood, AIC, and BIC, the GH distribution substantially ...

[\[PDF\] Micromoney: Moeda Elástica Microeconomicamente](#)

A Ada

A moeda que passasse a moderar a oferta de dinheiro sobre um tripé microeconômico de liquidez (emissão+ equidade+ empréstimo) finalmente cumpriria a promessa de uma moeda elástica às necessidades econômicas. A cada ciclo microeconômico comercial, uma Letra de Acreção Monetária (CAL 1) cria o montante de unidades da moeda (passivo monetário) equivalente ao valor a ser criado a mercado (ativo monetário), vindo a extingui-lo quando da comercialização ...

[\[PDF\] Micromoney: Microeconomically Elastic Currency](#)

A Ada

The currency that moderates the money supply on a microeconomic tripod of liquidity (issuance+ equity+ loan) would finally fulfill the promise of a currency elastic to economic needs. In each commercial microeconomic cycle, a Currency Accretion Letter (CAL) creates the amount of units of currency (monetary liability) equivalent to the value to be created in the market (monetary asset), and extinguishes it when it is commercialized, publishing, from the uncertainty between estimated and realized ...

[Enhancing cryptocurrency trading with technical analysis: exploring RSI, MACD, momentum, and stochastic oscillator indicators](#)

SF Vázquez, RR Camblor, JM Alvarez, JR Angulo - *Innovar: revista de ciencias ...*, 2026

Las criptomonedas han ganado terreno rápidamente en los mercados financieros, atrayendo a una amplia variedad de inversores, incluidas las entidades corporativas. Este estudio evalúa la rentabilidad de cuatro indicadores técnicos de uso generalizado—el índice de fuerza relativa (RSI), la convergencia/divergencia de medias móviles (MACD), el momentum y el oscilador estocástico—mediante el análisis de datos históricos de 16 criptomonedas líderes entre 2014 y 2021. El ...
