[PDF] Detecting Vulnerabilities in EOSIO Smart Contracts via Joint Static and Dynamic Feature Learning

X Wang, Y Tong, H Dong, B Wang, Y Xiao, P Zhang - ACM Transactions on Software …

This paper addresses the security challenges of EOSIO smart contracts, which are deployed in WebAssembly bytecode, frequently targeted by attacks, and inherently difficult to analyze. Existing approaches typically suffer limitations that either rely on symbolic execution with handcrafted rules, which faces scalability and coverage limits, or emphasize purely dynamic fuzzing, which often lacks semantic precision. To this end, we propose a deep learning based detection approach that performs joint …

Exploring multi-horizon cryptocurrency forecasting: can machine learning drive profitable trading strategies?

F Dal Lago, RA D'Alterio, F Hafiz, D La Torre, J Lin - Annals of Operations Research, 2026

This paper explores the integration of machine learning and automated machine learning (AutoML) in the field of cryptocurrency price forecasting, using Solana as the focal case study before extending the analysis to a balanced panel that adds Bitcoin, Ethereum, XRP and Dogecoin. Support vector machines (SVM), random forest (RF) and multilayer perceptrons (MLP) are compared with their MLJAR AutoML counterparts on identical data and splits, each classifying the direction of the next …

[HTML] PPEPV-RDL: Achieving Privacy-Preserving, Efficient, Publicly Verifiable Rational Delegation Learning

X Zhang, Z Chen, Y Tian, J Xiong, J Ma - CAAI Transactions on Intelligence …, 2026

Delegation learning is an implementation approach within privacy-preserving machine learning (PPML). It refers to that the delegator outsources the training task to servers with strong computing power due to its own limited computing resources, and the servers return the correct training results and get the service revenue. However, it is difficult to balance the security and usability of delegation learning, which brings great technical challenges to the design of security mechanisms for …

[PDF] Blockchain-enabled value generation induces cooperative tipping points in geriatric care networks

G Huang, J Ma, J Wang - Humanities and Social Sciences Communications, 2026

The global demographic shift threatens the fiscal sustainability of state-sponsored geriatric care. While community mutual aid offers an alternative aligned with Sustainable Development Goals (SDGs 3 and 11), traditional systems collapse due to free-rider exploitation and deflationary hoarding. This study proposes a permissioned consortium blockchain to transform informal volunteerism into a robust care economy. Utilizing a high-fidelity Agent-Based Model (ABM) tracking 1000 …

Blockchain-Enabled Traceability in Food Supply Chains: A Comprehensive Survey of Trends, Challenges, and Design Practices

A Rashid, RW Ahmad, M Nachouki, AR Khan - SN Computer Science, 2026
Food supply chains involve multiple stakeholders, making it challenging to ensure product traceability, transparency, and trust throughout the farm-to-fork process. Conventional traceability systems often rely on centralized architectures that suffer from limited interoperability, delayed information sharing, data tampering risks, and inefficient product recalls. Although blockchain has emerged as a promising technology to address these challenges, existing studies provide fragmented …

Persistent Attacks against Nakamoto-style Blockchains and the Efficacy of Mitigation

J Hu, L Huang, N Ruan - IEEE Transactions on Computers, 2026
Nakamoto consensus is the most widely adopted decentralized consensus mechanism in cryptocurrency systems. Since it was proposed in 2008, many studies have focused on analyzing its security. Most of them focused on maximizing the profit of the adversary. Examples include the selfish mining attack and the recent Riskless Uncle Maker (RUM) attack. In this work, we introduce the Staircase-Unrestricted Uncle Maker (SUUM), the first block-withholding attack targeting the timestamp …

Finance and Philosophy: The Basics

E Ippoliti - A Philosophical Walk Down Wall Street, 2026
This chapter lays the philosophical groundwork for a deeper understanding of finance by examining its conceptual foundations, functional logic, and epistemic claims. I begin by outlining a philosophical approach to finance—one that moves beyond technical models to interrogate the assumptions, values, and ontologies embedded in market practices. By situating finance alongside broader traditions in philosophy, I trace how ideas about value, exchange, and rationality underpin the …

[PDF] THE APPLICABILITY OF BLOCKCHAIN TECHNOLOGY IN TÜRKİYE'S TAX ADMINISTRATION

VM Aydıner - 2026
The aim of this thesis is to evaluate the potential benefits and challenges that may arise if blockchain technology is used in Türkiye's tax administration and to identify how these challenges can be overcome. Rather than addressing blockchain technology through cryptocurrencies, the research considers it as a tool that can be used in Türkiye's tax administration. As the qualitative research method of the thesis, semi-structured interviews were conducted. Semi-structured interviews were carried …

Blockchain in the pharmaceutical supply chain: Ensuring drug integrity and traceability

CS Mazumdar, M Mathirajan - Supply Chain with Metaverse
Regulatory non-compliance, fragmented traceability, and counterfeit drugs are ongoing problems for the pharmaceutical supply chain. To close these gaps, blockchain technology provides a transparent, tamper-proof, and decentralised platform that makes it possible for safe data sharing, automated compliance, and real-time tracking. This chapter looks at how blockchain's immutable audit trails, smart contracts, and IoT integration improve drug integrity. It highlights enhanced recall …

[PDF] BRIDGING BLOCKCHAIN AND AI LITERACY GAPS IN FOOD SUPPLY CHAIN EDUCATION

H Zhang, G Natarajan, EH Ng - 2026

Blockchain and artificial intelligence (AI) have moved from the periphery of supply chain conversations into the mainstream, but actual deployment in the food sector still trails the hype. Two problems explain part of the lag: an underprepared workforce and an academic literature that leans on conceptual claims rather than documented cases. This study tackles both gaps in a single design. We surveyed 196 undergraduates drawn from STEM, business, and humanities majors at a large …
