[HTML] A Bibliometric Study of the Emerging Trends in Blockchain Research**DE Bărbuță, A Alexandrescu - Future Internet, 2026**

The field of blockchain technology is continuously expanding and attracting more research interest. Blockchain promises decentralization, transparency, traceability, and resistance to censorship, all of which have prompted a heightened adoption in a wide range of sectors. We analyzed 57,116 papers published between 2022 and 2025 to determine how the field evolved after Ethereum's 2022 transition from Proof of Work to Proof of Stake, a period not covered by earlier field-wide analyses. Using ...

- Cites: Bitcoin: A peer-to-peer electronic cash system. 2008 

**[PDF] Formalizing a Routing Layer for Cross-Blockchain Communication****L Rometsch, M Kobelt, M Sober, S Schulte - Distributed Ledger Technologies ..., 2026**

Blockchains are isolated by design. Interoperability solutions connect them but differ widely in trust, cost, and security guarantees. Since no single solution connects all blockchains, end-to-end cross-blockchain communication may require composing several of them in sequence. As the number of options grows, the space of possible communication paths increases, making path selection a non-trivial routing problem. To date, there is no formal framework for cross-blockchain routing. We address this ...

**Trust and sustainability in Web3 token economies: a multi-level socio-technical perspective on complex digital systems****H Singh, J Kaur, A Singh - Kybernetes, 2026**

Purpose Although token economies have become a defining feature of many Web3 platforms, their ability to sustain participation over time remains uncertain. A recurring pattern can be observed across several ecosystems: rapid initial growth is often followed by declining engagement, weakening trust, and unstable participation. This study seeks to understand why such outcomes persist despite increasingly sophisticated incentive structures. Design/methodology/approach The paper adopts ...

**[PDF] A Blockchain Network-Layer Intrusion Detection Framework Based on Dual-Stream Closed-Set Learning with OpenMax****CS Shieh, YY Chen, MF Horng, CC Lo, YS Chiu - IEEE Access, 2026**

Blockchain Layer-0 traffic is inherently variable due to peer discovery dynamics, ad-hoc connectivity, and continuous churn. These characteristics complicate intrusion detection when attack patterns are absent from training. To address this issue, this study proposes a parallel dual-stream closed-set architecture integrated with OpenMax. The 1D Convolutional Neural Network (1D-CNN) stream, trained with Center Loss, generates activation vectors (AVs) for mean activation vector (MAV) ...

**[PDF] Stochastic consensus dynamics for decentralized decision systems****ALM Vilela, CBL Silva, KP Nelson, E Cobanera... - arXiv preprint arXiv ..., 2026**

A fundamental mechanism underlying collective phenomena in social, technological, and economic systems is decentralized decision-making, in which the behavior of individual agents follows from local interactions in the absence of central coordination. Consensus formation is a central feature of such systems, with

relevance to blockchain networks, distributed artificial intelligence, autonomous multi-agent systems, distributed control, and collective decision networks. We investigate ...

[\[PDF\] Incremental Consistency Execution for Autonomous Intelligent Systems](#)

C Li, J Liu, Y Chen, Z Huang - arXiv preprint arXiv:2609.24090, 2026

Long-horizon autonomous intelligent systems rely on heterogeneous components such as large language models, databases, external APIs, and rule engines, while their external states continuously change during execution. Re-executing the entire workflow after every change introduces substantial redundant computation. This paper proposes an incremental consistency execution method based on task fact contracts, field-level dependency masks, and state perturbation result invariant ...

[\[PDF\] Beyond Returns: A Multi-Criteria Risk Analytics Framework for Investment Decision-Making in Tokenized Real-World Assets](#)

JA Aura - Journal of Intelligent Decision Making and Information ..., 2026

Tokenized real world assets are now a fast growing segment of global capital markets. The appraisal of these instruments is still anchored on expected return alone. This anchoring is a problem because tokenized exposures are shaped by technology risk and legal risk and liquidity risk at the same time. The purpose of this study is the construction of a multi criteria risk analytics framework for investment decision making in tokenized real world assets. Eight evaluation criteria were ...

[\[PDF\] Эмиссия стейблкоина внутри БРИКС и перспективы внедрения во взаимной торговле](#)

ЛС Гиваргизова - Российский внешнеэкономический вестник, 2026

Аннотация С момента своего создания криптовалюта стала широко обсуждаемой, но недостаточно понимаемой технологией, связанной с финансами. В статье рассматривается конкретный вид криптовалюты—стейблкоин, который при государственном регулировании и внедрении во внешнеторговые операции, должен работать как экономически эффективная система денежных переводов в обход системы SWIFT.

[\[PDF\] Kripto Döngüsü ve ABD Para Politikası: Faktör Temelli VAR ve EKK Analizi](#)

ŞŞ TABAK, A HAZAR, Ş BABUŞCU - Üçüncü Sektör Sosyal Ekonomi Dergisi, 2026

Bu çalışma, ABD para politikası ve küresel finansal koşulların kripto varlık fiyatları üzerindeki etkisini Nisan 2020–Mayıs 2026 dönemi için incelemektedir. Dokuz kripto paranın ortak fiyat hareketi Temel Bileşenler Analizi ile kriptofaktöre dönüştürülmüştür. Birinci bileşenin toplam varyansın yüzde 74'ünü açıklaması kripto para piyasaları için baskın sistemik bir bileşenin varlığını teyit etmektedir. Kısa dönemli dinamikler VAR Modeli, uzun dönemli seviye ilişkileri ise Newey-West HAC ...

[The Fintech Revolution's Effects on the Future of Banking: Prospects and Hazards](#)

S Yadav, AA Dar, AM Ilyas, TL Rao, NVJ Rao... - Advances in Statistical ..., 2027

FinTech has made banking services more accessible, especially to under-served groups, by enabling speedier transactions, personalized financial solutions, distributed ledgers, wireless banking, and powered AI financial tools. However, the quick uptake of FinTech also brings several risks that need to be properly handled. The growing dependence of financial institutions on digital platforms has increased the dangers associated with cybersecurity, increasing their susceptibility to fraud and ...
