Symphony: A Sharded Blockchain for Efficient Smart Contract Execution

R Zhang, Q Ding, Q Liu, S Guan, J Shi, Z Xiao, M Wan... - IEEE Transactions on ..., 2026

Sharding is a promising approach to increase blockchain throughput by partitioning the system into multiple shards and distributing the workload. However, existing sharded blockchains exhibit poor performance in executing cross-shard smart contract transactions, which require costly multi-round consensus and heavy cross-shard communication to synchronize data. Furthermore, as the system scales with more shards, the volume of cross-shard transactions naturally increases, thereby ...

**[PDF] Hidden by complexity? Measuring stablecoin, crypto and decentralised finance ecosystems**

T Aerts, R Heijmans, J Paulick, V Vuletic - 2026

Decentralised finance data presents a distinctive paradox: while every data point is publicly recorded and accessible, deriving meaningful insights is obscured by the scale, fragmentation and complexity of the ecosystem. Key metrics illustrate that the rapidly evolving DeFi ecosystem introduces unique challenges for economic and financial research in accurately capturing financial activity in DeFi. These challenges stem from protocol architecture and the technical execution of transactions that ...

**Valuation of cross-inverse cryptocurrency options with multi-scale stochastic volatility and correlation dynamics**

A E. Marasigan - Review of Derivatives Research, 2026

Cryptocurrency markets are characterized by extreme volatility clustering and unstable cross-asset correlations. These features generate joint-tail risks that standard, lower-dimensional diffusion models often fail to capture. To address this limitation, this paper introduces a multi-factor pricing framework for cross-inverse options by combining a double-scale Heston stochastic volatility structure with a Jacobi mean-reverting correlation process. Although the interaction of these ...

**[PDF] Blockchain Technology for the Automotive Sector**

A Butera - 2026

The automotive sector is one of the most data-intensive industrial ecosystems in the global economy, and its value chain depends on information that crosses organizational, jurisdictional, and lifecycle boundaries. The current data infrastructure, organized around isolated proprietary databases under unilateral stakeholder control, leaves multiple persistent trust gaps along the vehicle lifecycle. Among them, this thesis addresses four: opacity in automotive supply-chain ...

**[PDF] TRANSFORMACIÓN E INNOVACIÓN EN LA EDUCACIÓN JURÍDICA CONTEMPORÁNEA: INVESTIGACIÓN, TECNOLOGÍA Y FORMACIÓN PROFESIONAL**

MJR Cedeño, JPN Vera, MFF Largacha, HEB Intrigado... - ... Editores Universal-APEX, 2026

La educación jurídica enfrenta actualmente profundas transformaciones derivadas de los avances tecnológicos, la globalización del conocimiento, la evolución de los

sistemas normativos y las nuevas exigencias del ejercicio profesional del Derecho. En este contexto, las universidades se encuentran ante la necesidad de replantear sus modelos formativos para garantizar una preparación pertinente, integral y acorde con las demandas de las sociedades contemporáneas. El presente libro ...

[PDF] Utjecaj digitalizacije i kriptovaluta na psihološke stavove prema novcu

J Cvetko - 2026

Kriptovalute i digitalno gospodarstvo privukle su veliku pozornost posljednjih godina i spadaju među područja koja se brzo razvijaju. Ovaj rad ispituje psihološke učinke kriptovaluta i učinke digitalnog gospodarstva na ponašanja investitora. Raspravlja se o tome kako volatilnost kriptovaluta utječe na percepciju rizika i procese donošenja odluka investitora. Osim toga, raspravlja se učinci digitalnog gospodarstva, poput anonimnosti i sigurnosti, na financijsko ponašanje i emocionalno blagostanje ...

[PDF] Blockchain-Based Tamper-Evident Chain of Custody for Criminal Evidence: A Proposed Framework for Bangladesh

MDS HOSSAIN, A Haque - IJAICET-International Journal of Artificial Intelligence ..., 2026

Criminal justice systems depend on an unbroken, verifiable chain of custody (CoC) to prove that evidence presented in court is the same evidence collected at the crime scene, unaltered and unsubstituted. In Bangladesh, custody records remain largely paper-based, tracked through police malkhana (property room) ledgers vulnerable to loss, forgery, and unrecorded handling, with no unified mechanism linking crime-scene seizure, forensic analysis, and courtroom production. This paper proposes a ...

[PDF] Price Dynamics Between Digital and Traditional Finance: An Examination of the Asymmetric Relationship Between Sports Club Fan Tokens and Stock Returns in ...

O Oğuz - Research in Sports Science, 2026

This study examines the financial interaction between stock returns and fan tokens of the four major football clubs competing in the Türkiye Super League and publicly traded. The study analyzed the return relationship between fan tokens representing digital assets and shares representing traditional assets using the asymmetric causality test method. In this respect, it explains how digital assets integrate with traditional financial markets using empirical data. The study aimed to fill a significant ...

[PDF] Why Money Must Reflect Goods and seRvices RendeRed: a PProPosal foR inflation-fRee, PProductivity-Backed cuRRency

MS Alam

Contemporary monetary systems—whether fiat, commodity-backed, or digital—are beset with structural deficiencies that detach money from actual economic productivity. These deficiencies manifest in inflation, deflation, speculative volatility, and systemic inequality. Despite technological advances in cryptocurrencies and

central bank digital currencies (CBDCs), no dominant model has adequately grounded monetary value in real goods or services. This article critiques the ...
